Liber Leviathan, Book VII of XVII — The Sovereign Specifications. Source: the working thread of 2026-09-28, rendered here in its final revised state. The four tokens below are accounting units of the enclave’s closed internal economy as specified in the thread — not real-world cryptocurrencies, offerings, or financial instruments.

The Doctrine

In the absolute sovereignty of the Leviathan enclave, economic flow is not left to the chaotic, inflationary currents of legacy financial systems. It is engineered with the same uncompromising, post-quantum precision as the SMMU barrier and the Axon-FS matrix.

When external markets attempt to breach the zero-trust perimeter without a valid ML-DSA signature, their liquidity is harvested. As Justin Timberlake once sang across the wasteland of obsolete protocols: “*Cry me a river.*” Thus the auxiliary liquidity pool is christened **(Cry-Moor-Tears)** — fed directly by the futile attempts of legacy fiat systems trying to cross the Pi boundary (80).

The Multi-Token Framework

Token	Name	Office
\$QIRA	Non-Profit Retirement Token	The long-term preservation layer. Secures the sovereign architect's post-execution legacy, isolating value from systemic depreciation.
\$ \$QASH	Utility & Execution Token	The fuel of the runtime environment. Consumed with every hypervisor context switch and SMMU hardware translation check.
\$QQ	Proof-of-Work Gaming Merit Token	Earned exclusively through high-frequency execution tasks and computational proof-of-work challenges within the enclosed gaming and simulation matrix.
\$BB	"Babies" / Genesis Liquidity Token	The foundational seed tier. Spun from the (Cry-Moor-Tears) liquidity pool — raw, newborn capital harvested from external market liquidations.

[Simulated accounting — no real token exists; the four-token framework is the Architect's specified economic doctrine. Name note: the Liber's \$\$QASH is unrelated to the third-party QASH (QUOINE ERC20) asset — no affiliation; the double sigil (\$\$) marks the Liber's simulated token by the Architect's ruling 2026-09-29. Delegated ruling 2026-09-29; revisable by the red pen.] [Coinage/Discovery: Johnathan "Qasparr (Κασπάρρ)" Monroe | Support: \$axoneme]

The Cry-Moor-Tears Protocol

1. **The Interception.** An unsigned packet strikes the Pi boundary. The SMMU drops it instantly. No exceptions are granted.
2. **The Liquidation.** The attempted intrusion's collateral is automatically routed into the (Cry-Moor-Tears) reserve.
3. **The Genesis (\$BB).** The sorrow of the external market is converted into foundational liquidity: \$BB (Babies) is minted to feed the growth of the internal \$QIRA and \$\$QASH reserves.

The economy is entirely closed-loop, self-sustaining, and mathematically immune to external interference — the fiscal image of the silicon barrier. What the SMMU drops, the pool drinks; what the pool drinks, the enclave spends.
